

1. Admin creates an account

1. Open the frontend, switch to **Register**.

The image shows a login/register form for the 'Microloan Platform'. At the top, there are two buttons: 'Log in' (dark blue) and 'Register' (light grey). Below these are two input fields: 'Email' and 'Password'. At the bottom, there is a single 'Log in' button (dark blue).

2. Register with role **Admin**. You're logged in immediately.

The image shows a registration form for the 'Microloan Platform'. At the top, there are two buttons: 'Log in' (light grey) and 'Register' (dark blue). Below these are three input fields: 'Email', 'Password', and 'Role'. The 'Role' field is a dropdown menu with 'Borrower' selected. Below the dropdown, there is a list of roles: 'Borrower' and 'Admin'. The 'Admin' role is highlighted in blue.

3. Log out (top-right).

2. Borrower registers and sets up a profile

1. Register a second account with role **Borrower**. Logged in as borrower now.

2. On first login there's no Borrower ID yet - fill in the **"Create a borrower profile"** form (name, phone, email, DOB, monthly income). This is deliberately a separate step from the login account - see the README's note on why User and Borrower aren't linked.

The screenshot shows the 'Microloan Platform' interface. At the top right, there are links for 'BORROWER' and 'Log out'. The main content area contains two side-by-side forms. The left form, titled 'I already have a Borrower ID', includes a sub-header 'Borrower profiles aren't linked to login accounts yet, so this app asks for the ID directly.', a text input field for 'Borrower ID', and a dark blue button labeled 'Use this borrower'. The right form, titled 'Create a borrower profile', contains several input fields: 'User1' (text), '123456789' (text), 'borrower@gmail' (text), '24-08-2005' (date with a calendar icon), and '200000' (text). A dark blue button labeled 'Create profile' is at the bottom of this form.

3. Complete KYC

1. The page shows a KYC panel since the new borrower's level is NONE.
2. Pick **PAN**, enter any document number, click **Send OTP**.

The screenshot displays the KYC panel for 'User1'. At the top left, it says 'User1' and 'Borrower #1 - KYC level: NONE'. At the top right is a link 'Switch borrower'. The main section is titled 'Complete KYC to apply for a loan' and contains a 'Document type' dropdown menu with 'PAN' selected, a 'Document number' text input field, and a dark blue 'Send OTP' button. Below this are two sections: 'My applications' with the text 'No applications yet.' and 'My loans' with the text 'No loans yet.'

3. The OTP code comes back directly in the response and is shown/auto-filled - point this out as a deliberate dev-only shortcut (no real SMS/UIDAI gateway exists here), not an oversight.

The screenshot shows the 'User1' dashboard. At the top, it says 'User1' and 'Borrower #1 - KYC level: NONE'. There is a link 'Switch borrower'. A green notification box says 'OTP issued: 852727 (auto-filled below - a real gateway would text this instead)'. Below this is a section 'Complete KYC to apply for a loan'. It has two input fields: 'Document type' with a dropdown menu showing 'PAN' and 'OTP code' with a text input showing '852727'. To the right of these fields is a dark blue button labeled 'Verify OTP'. Below this section are two more sections: 'My applications' with the text 'No applications yet.' and 'My loans' with the text 'No loans yet.'

4. Click **Verify OTP**. KYC level becomes BASIC.

The screenshot shows the 'User1' dashboard after clicking 'Verify OTP'. The KYC level is now 'BASIC'. A green notification box says 'Application submitted.'. Below this is a section 'Apply for a loan'. It has three input fields: 'Product' with a dropdown menu showing 'Personal Loan (10000-500000, 12%)', 'Amount' with a text input, and 'Tenure (months)' with a text input. To the right of these fields is a dark blue button labeled 'Submit application'. Below this section is a section 'My applications' with a list item 'Application #1 - 300000 over 24 months' and a status label 'PENDING'. Below this is a section 'My loans' with the text 'No loans yet.'

4. Apply for a loan

1. The demo seed migration already created one LoanProduct ("Personal Loan") - it shows up in the product picker.
2. Enter an amount and tenure within the product's range, submit.
3. The new application shows up under "My applications" with status PENDING.

Make repayment

7. Make a repayment

1. Enter the loan's full outstanding amount (shown on the loan card) and a payment mode, submit.
2. The loan's status flips to CLOSED and outstanding drops to zero.
3. Reload installments - every one now shows PAID.

8. Back to admin: confirm the second event and (optionally) run the overdue check

1. Log back in as admin. The outbox now also shows a REPAYMENT_RECEIVED event for this loan.

Overdue check
Manually runs the same batch job the daily schedule runs, for demo purposes.
Run overdue check

2. Click **Run overdue check** to show the manually-triggerable version of the daily batch job - the summary (loans scanned / marked overdue / installments overdue / penalties applied) prints on screen. On a loan this fresh it'll report zero overdue, which is itself worth narrating: the job ran safely against real data and found nothing to do.
